

WILD SCIENCE!

A young child with long dark hair is seen from behind, reaching out to touch a large, glowing, spherical exhibit. The exhibit is covered in a complex network of red and white lines, resembling a molecular model or a biological structure. The scene is lit with warm, reddish-orange light, creating a dramatic and educational atmosphere.

The "WILD SCIENCE!" attraction was created so that families and children could experience the mysterious and entertaining aspects of science & technology in a casual environment without having to sift through facts and information. Learning occurs through hands-on interaction with the various exhibits, rather than through signage and information.
